Red-legged Frogs and Fairy Shrimp

As there were no live streams on the project site, it would be highly unlikely that there would be any red-legged frogs as they would require permanent water.

There was a small wet area from a seep with standing water. However, as contamination from oil was evident, it is very unlikely that red-legged frogs or fairy shrimp could survive in it.

In my opinion, there would be neither red-legged frogs or fairy shrimp on the project site.
